

One Little Coffee Shop

A 2D social simulation about designing a space and watching what it becomes.

BROWSER GAME

EMERGENCE

AGENT-BASED

Prompt → Design → open → observe → adapt

The game loop

The player is given a target café, then tries to create the conditions for it to emerge.

The player influences the system — but never directly controls the people inside it.

Where the emergence happens

I program small rules and not complete outcomes.

Not implicitly do:
“Create a student café.”

That identity appears because individual customer rules interact with one another.

Player decisions → environment → customer behavior → new environment

How I'll build it

A small browser simulation with independent customer agents.

TOOLS

JS

JavaScript

game logic

HTML

HTML / CSS

interface + layout

p5

p5.js

2D movement + drawing

AGENT-BASED MODELING

CUSTOMER AGENTS

STUDENT

Budget: low
Noise tolerance: low
Wi-Fi: important
Stay time: long

SOCIAL

Budget: medium
Noise tolerance: high
Crowds: likes
Stay time: medium

REGULAR

Budget: medium
Noise tolerance: medium
Routine: important
Stay time: short

I'll start with a few traits. Add complexity only if the core system works.

Visual direction

Cozy, warm, simple: with the potential to become slightly chaotic.

PALETTE

top-down / slight angle

simple pixel-art or illustrated sprites

icons + expressions instead of lots of dialogue

calm setup → lively simulation

VISION: a café that looks inviting enough to watch even when the player is not clicking.

The idea behind it

You design the space.

The customers define what it becomes.

PLAYER
DECISIONS

ENVIRONMENT

CUSTOMER
BEHAVIOR

CAFÉ
IDENTITY

The café you intended to create $\neq$ the café that actually emerged.
